MX-V Drill Stand HD Adapter Collar Insert

This MX-V Drill stand is equipped with the newest version adapter collars ensuring that the heavy-duty user will have the gripping power they need on their drill to withstand greater drill bit force. See the instructions below for proper use and adjustment.

1. Alignment pin on each adapter collar goes in to the gap in the tool holder
2. Insert from above only
3. If required for extra grip...
 - a. Install drill into proper collar,
 - b. Tighten set screws until you feel contact
 - c. Very Slightly tighten set screw further to bite into the tool collar
 - d. You may have to pry open the tool holder slightly to insert the collar when the set screws have been tightened, use a screwdriver to pry the gap just enough to insert the collar with the drill installed
4. Tighten Blue clamping lever securely to prevent the drill and collar from sliding out during use.
